

## What to Expect with Your Roofing Project

**Here are a few tips to help you prepare for your roofing project:**

**Noise Level:** Without a doubt, the roofing process can be noisy. If you have pets that are sensitive to loud noises, you may want to consider finding them a temporary place to stay during your project. As a reminder, you do not have to be home while the work is being done.

**Electricity:** Please make electricity available for the crew. An exterior outlet or an outlet in your garage would be sufficient.

**Starting Time:** This is generally between 7:00 - 8:30 a.m. Monday - Friday and some Saturdays. Start and end times may vary.

**Protection:** The attic might collect debris during your roofing replacement. If you have items in your attic you may want to protect them. You will also want to cover any precious items you have in the garage with a tarp to protect from debris. This might include a car, motorcycle, tools, etc.

**Remove Décor:** The vibrations from hammering can sometimes knock decorations off of the walls, so you should take them down ahead of time. This might include mirrors, pictures, wreaths, loose shelving, etc.

**Deliveries:** A dumpster and the materials will be delivered to your home several days before the installation starts. Your project manager will keep you informed of the timing of the deliveries. You do not have to be home for these deliveries.

**Construction Site: Be Aware -** Once work begins, even with the best of care the property becomes a construction site. Homeowners, family members, and visitors should exercise caution when entering the construction area. Be sure to take steps to keep pets and children out of harm's way.

**Upon Completion:** When your roofing project is complete, your installers will thoroughly clean up all debris and will also run an industrial magnet across your lawn, driveway and patio to ensure they are all 100% nail-free.

**Final Inspection:** You will be notified of the time frame for the final roofing inspection. We will provide the necessary photos and the permit - these will need to be posted in a visible area for the inspector to sign off.

## What to Expect with Your Windows Project

**Here are a few tips to help you prepare for your windows project:**

**Preparing for Installation:** Please remove any valuables, pictures and knick-knacks from the window installation area.

We will take care of removing blinds, curtains and furniture. Once the installation is complete, we will carefully put these items back for you.

**Weatherproofing:** If the installation process takes more than one day, we will make sure that all windows and doors are properly weather-sealed and secured before leaving for the day.

**Clean Up:** At the end of every day, we will thoroughly clean the work area before leaving your home.

**Final Inspection:** Once the installation is complete, our team will provide the necessary info to get the final inspection scheduled with the city. Please note that the city requires that all smoke and carbon monoxide detectors be up to code in order for the windows project to be considered complete and to pass inspection. Please speak to the window installers if you have any questions regarding the cost of having us do this. If you prefer to install them yourself our window installers can help you understand what the city requires.
